Final thesis degree project

Site analysis

The intervention area is right in Morillo's Glen located in Cacique Mara Parish. The growth in this entire area is generally informal, does not follow any urban criteria and the spontaneous urban growth has rejected the existence of natural entities (the glen and the vegetation) by turning its back on it, so the ecosystem has been affected.

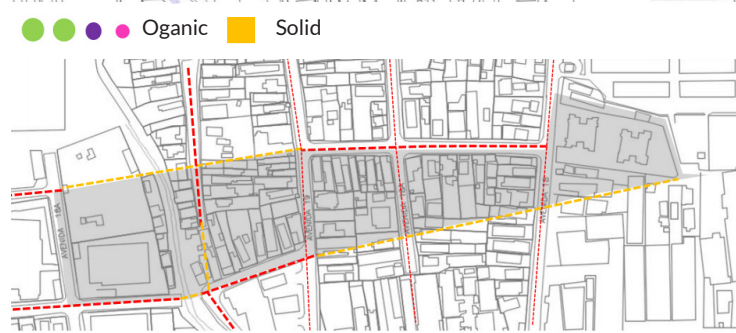

Proposal & Solutions

The proposal consists of recognizing these natural entities, giving them their value and including them in the urban landscape, taking in consideration and respecting the needs that led to spontaneous urban growth, the objective is to place a new urban proposal that organizes and includes it all.

...The footprint reconstructs the scene...

The footprints are Organic (Natural elements) and Solid (Informal urban growth) through the connection of existing elements and inclusion of natural isolate elements, it is possible to create links that will help to create order.

From a vanishing point that will start in "Residencias Bocono" and will converge in the glen (the main point of this project) the connection will be done through "the footprints".

The isolated roads will be connected to optimize the urban morphology for more efficiency.

● Implicit Road ● Proposed Road

Site photos

Schematic Urban proposal

Final Urban Proposal

After finishing establishing the urban proposal, the details of the final project was established.

Morphology, Volume composition.

The morphology responds to the urban composition previously made, composed by the organic and the solid, being the organic (natural entities) and solid (constructed entities) represent as pixels or squares.

The building is made as solid footprint of the landscape.

The volume opens to give way to the glen being this the point where everything converges and giving prominence to the natural entity.

I also work with slopes, since the glen is a depressed element on the ground, by including these elements in the proposal this would not be isolated but integrated. The objective is to place a new urban proposal that organizes and includes it all.

Schematic Volume proposal

Program.

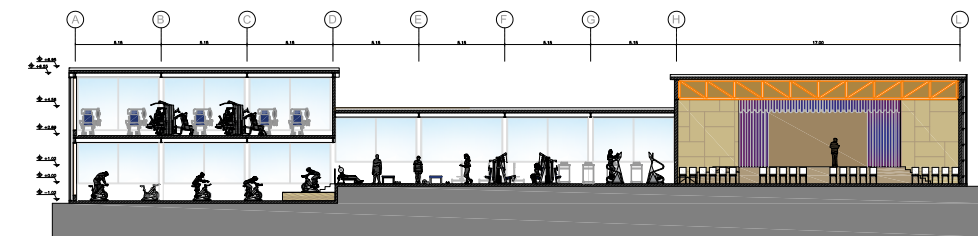

The intention of this is to create a program that responds to the needs and interests of the neighbors of the area, in this way they would give a sense of belonging, caring for a common benefit and would not turn their backs on this entity anymore.

After interviews with the people of the area, the following program was created for the best interest of the community

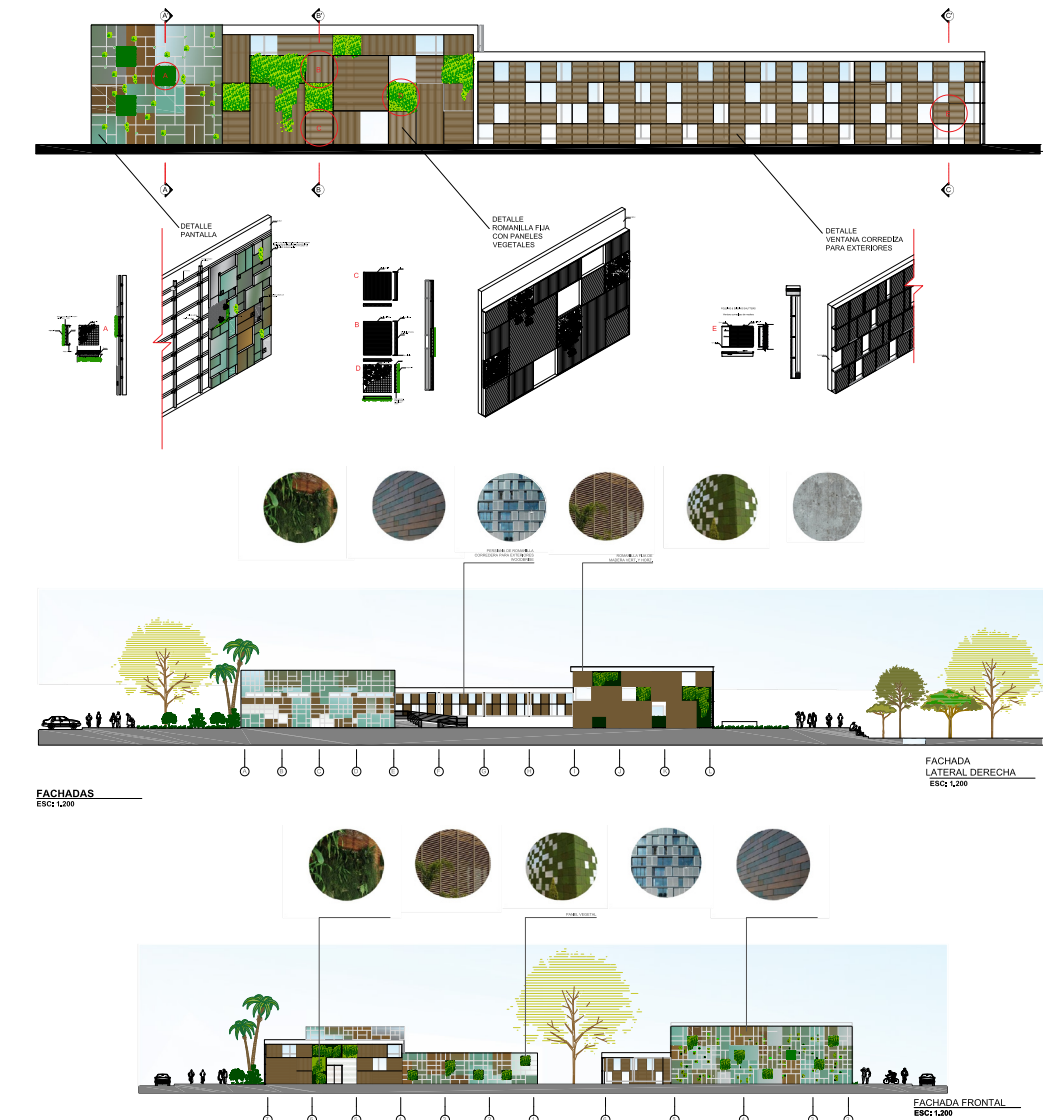

Library Park - Gym - Conference room - Multiuse room - Coffe Shops - Administration office

CORTE A-A'
ESC: 1.200

CORTE B-B'
ESC: 1.200

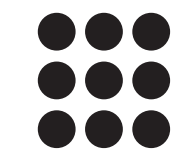

Facades, Venacular Lanscape.

Use of exclusive vegetation of the area and climate + Colors of natural elements present on the site.

Fixed lattice with vegetation: Pixels with overflowing green elements.

Screen panels with green panels: Combination of the natural print (vegetation) + pixel (artificial print), Including vernacular values through color.

Curtain facade: Mobile lattice that are arranged in random shapes. Creates a pixelated facade in the external space and in the interior the pixels are seen through the reflection of the sun.

Freelance Interior Design Projects

Description

Interior design proposal for a residential complex that was being built at the moment, the idea was to show potential clients how the space could look like once it was conditioned.

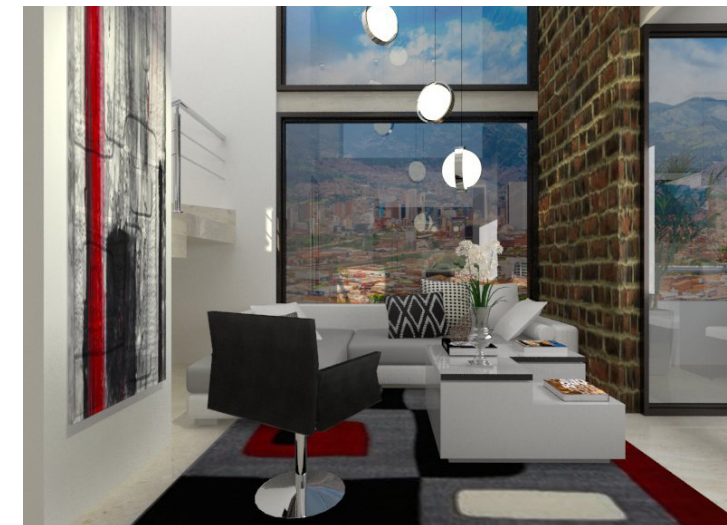

The design was based on references sent by the client. Original blue prints were used to construct the area.

Year: 2018 

Location: Colombia, Medellin 

Software:  |

2 LIVINGROOM

Description.

The renovation of this space was a combination between the new and the old, some modifications were made to the living room, such as, the incorporation of a fireplace, the doors and windows were changed, but some elements already present were kept, such as the texture of the floor among other details.

The selection of the new furniture sought to fit not only with the pieces of the previous furniture that stayed, but also with the new refreshment in the space, the result being a very cozy space.

Description

Kitchen design from scratch, the client sent photos and dimensions of the kitchen area and relevant information such as the dimensions of the appliances that were already bought and the location of electricity and water points, after a couple of discussion about expectations, needs and shared ideas, this were the results.

7 COMMERCIAL

Description.

The purpose of this proposal was to create a innovative interior design proposal to generate a different experience for the visitors, a gloomy environment was required to generate a sense of privacy and incognito, with rustic finishes and where the lighting was the protagonist.

The result is quite gloomy, lamps and lights play a fundamental role in this design, and it is combined with elements that stand out with light such as lacquers, in addition many cold colors are used to generate contrast with the lighting and with specific elements.

Year: 2019 

Location: Hamburg, Germany

[Fiverr.com/brendaluciah](https://www.fiverr.com/brendaluciah) 

Description.

The idea was to create a Japanese - Asian “grab and go” restaurant (Japanese take-out food such as pre-packaged sushi, ramen, udon, steamed dumpling, etc.) in NYC. The client wanted to add Japanese style. For example, some striking prints that covered all over the side wall, or some accent of Japanese feeling. This was achieved through the inclusion of natural bamboo in the entrance. Bamboo is a strong symbol in Japanese culture, associated with the qualities of strength, stability and durability, success in life, among other meanings. We wanted to include this element as a protagonist in the entrance to the establishment, and it extends throughout the whole site, especially the part of the bar as if the bamboo grows unchecked and your stems build up the area, or at least that was the intention, We can also see other allegorical elements to the Japanese culture that with colors create the result we see now.

[Fiverr.com/brendaluciah](https://www.fiverr.com/brendaluciah)

Description.

This was a proposal for the Metzgersoehne franchise placed in downtown Vienna, all design elements such as logos, fonts, color codes were given by the client by marketing guidelines.

Metzgersoehne is a 300-year-old brand, the intention was to attract customers both young and old. Therefore, the proposal had to be somewhat contemporary without losing ownership of the historic brand.

The company is famous for a special cake praline that was also delivered to the royal court in Vienna.

The store had to have distinctive shelves for praline boxes and bagged cookies, as well as a contemporary counter where customers can choose from a variety of presented pralines.

Behind the counter there should be a wall of shelves with packaging for the chocolates sold open, as well as a large company logo.

Based on all these premises, a proposal was made with classic furniture and pastel colors palette, following the marketing guidelines and styles of the company.
